Mannheim ▾ +

Development of own controls

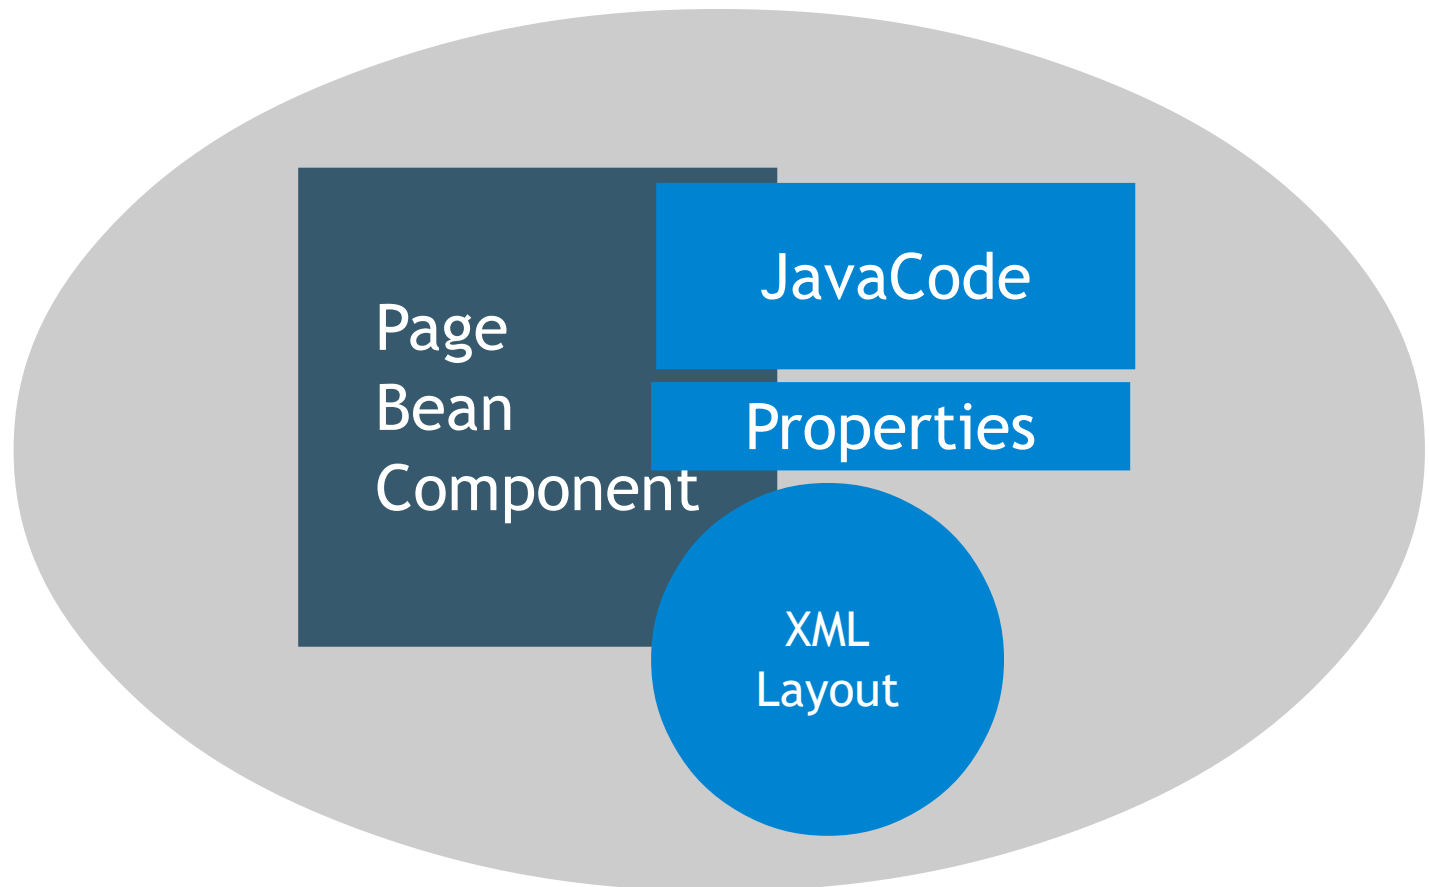

- Server side controls
 - Simplified
 - More consistent
 - Nicer integrated into tools
- .jar-file deployment
- Base style „enrichment“

Control library extension

PageBeanComponent as control

Control `<pref>:<controlName>`

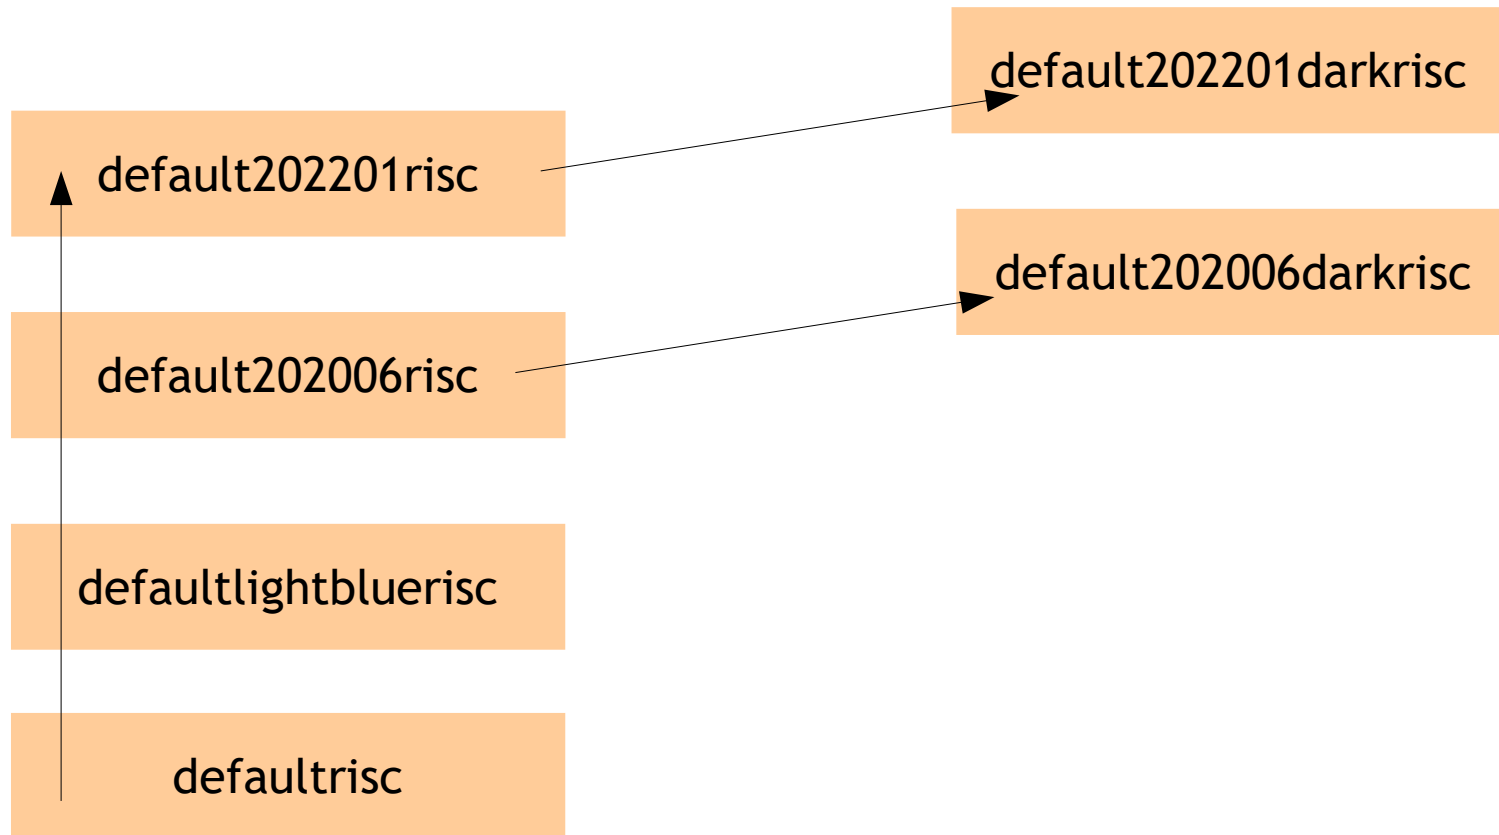

A PageBeanComponent still is a „page“

- Characteristics
 - needs to be created as instance
 - prepare
 - data to be transferred from outside into the component
 - events by IListener

PageBeanComponentControl

- A page bean that really behaves like a control!
- Example
 - tpbc:labeller
 - tpbc:touchtime
 - tpbc:touchdate
